EDUCATION

Abertay University

MSc Computer Games Technology

Dundee, Scotland

September 2025 - Present

Vellore Institute Of Technology

BTech Cse. Spec in Gaming Technology - 8.40 Cgpa

Bhopal, Madhya Pradesh

September 2021 - May 2025

TECHNICAL SKILLS

Languages: C#, C++, Python, Java, SQL

Developer Tools: Unity 3D, Unity Engine, Blender, Git

Core Competencies: Gameplay Programming, Multiplayer Architectures, Netcode, AI Systems

Practices: Agile/Scrum, URP

EXPERIENCE

Unity Game Developer

January 2025 - July 2025

World Game Community

Korea(Remote)

- Converted single-player Tetris game to multiplayer experience using Unity Netcode for GameObjects, implementing real-time game state synchronization and player input handling across multiple clients.
- Set up and configured dedicated server infrastructure on RDP environment, establishing reliable host-client architecture and network communication protocols for seamless multiplayer gameplay.
- Integrated matchmaking UI with WGC backend APIs for authentication and session management. including waiting room interface, player lobby management, and connection status displays.

Unity Game Developer Intern

September 2024 - December 2024

IDZ Digital Pvt Ltd

Mumbai(Remote)

- Develop and create 3+ distinct types of coloring games in Unity, enhancing user engagement and increasing playtime by 15% through innovative gameplay mechanics.
- Write and optimize C# scripts for game functionality, resulting in a 10% improvement in performance and a significant reduction in bug reports.

PROJECTS

S.I.I.D | Unity, C#, AI Systems

Abertay University

- Engineered an advanced AI framework for a turn-based strategy game using behavior trees and state machines to drive dynamic, reactive enemy decision-making.
- Developed custom grid-based pathfinding and tile state management systems from scratch, handling adjacent spatial calculations without reliance on standard geometric mesh boundaries.

The Tetrominoes Battle | Unity, C#, Netcode, Dedicated Server

World Game Community

- Architected the full client-server model and custom dedicated server deployment for a fully networked multiplayer Tetris experience.
- Ensured absolute synchronization of fast-moving grid pieces across latent networks and integrated backend transaction and authentication services.

Blind to Truth | Unity, C#, Rapid Prototyping

Global Game Jam 2026

- Designed and developed a vertical platformer where players utilize a magical mask to toggle between reality and the afterlife to navigate hidden traps.
- Built all core gameplay mechanics, state-toggling logic, level generation, and player controllers under strict 48-hour jam constraints as a solo developer.

Inferno | Unity, C#, Game Design

VIT Bhopal

- Played a key role in a collaborative team of 5 in the development of a single-player horror thriller game, acting as Core Game Developer and Enemy AI Developer.
- Revamped game design by incorporating survival-driven objectives, and developed a robust AI enemy system, increasing overall game completion rates by 20%.
